

International Project Manager in Energy Efficiency

Job Summary:

As an International Project Manager in Energy Efficiency, you would have to work on various energy efficiency projects and ensure overall management for certain projects.

Supervisor: Director of Operations

Specific Functions:

1. Overall Project Management

- Overall contract and schedule management.
- Preparation of detailed budgets and work plan, discussion and agreement on project needs for human and material resources with the Director of Operations.
- Responsible for task allocation, time schedules and contractual arrangements to coordinate project resources (internal and subcontractors).
- Responsible for maintaining the deliverables schedule pursuant to the contract.
- Maintain regular contact with clients to ensure that the work complies with the spirit and terms of the contract along with their expectations.

2. Technical Tasks

The technical work would include, among others, the following topics:

- Energy auditing in commercial and institutional buildings as well as in industrial facilities.
- Design of energy efficiency projects and studies.
- Elaboration of energy efficiency policies.
- Design of financing mechanism for energy efficiency projects.
- Energy efficiency and demand-side management program design, implementation and evaluation.
- Preparation of project idea notes (PINs) and project design documents (PDDs) for carbon emission reduction projects.

Background and Qualifications:

- Bachelor of engineering, science, economics, finance or any other relevant major degree.
- Master's degree in a related field would be an asset.
- Bilingual (English and Spanish), French would be an asset.
- A minimum of 10 years' experience in energy efficiency is required.
- Project management and international experience would be an asset.
